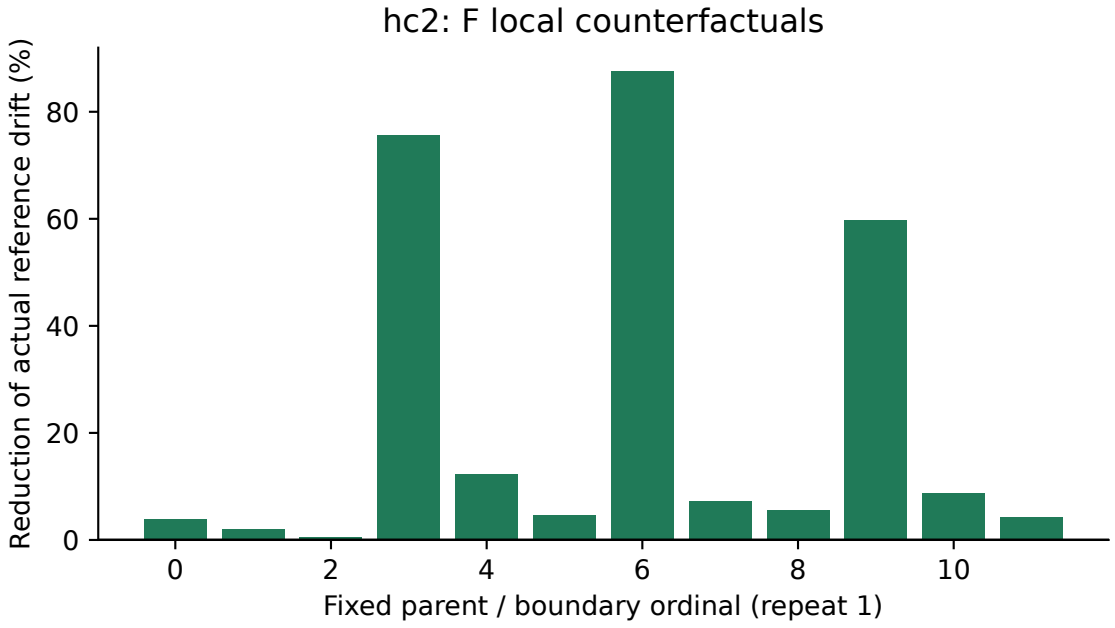
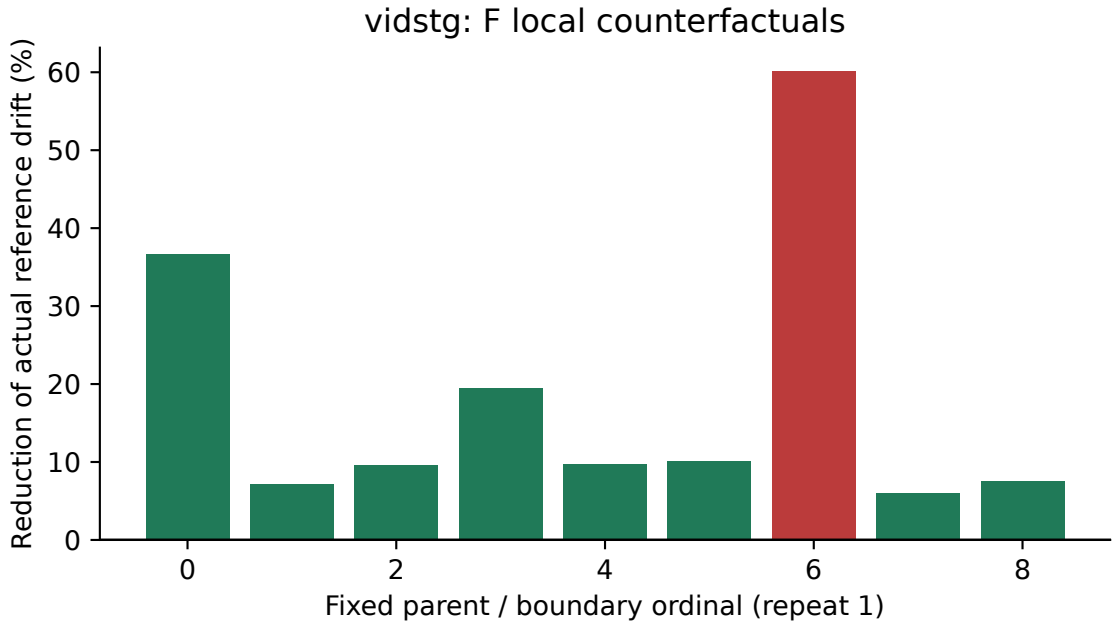
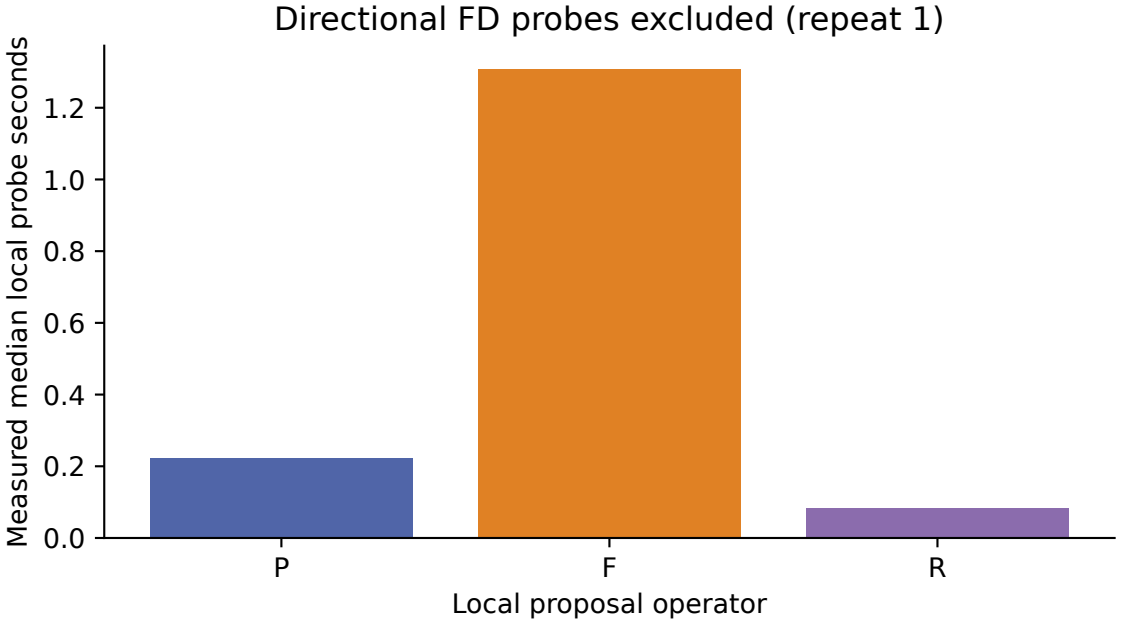
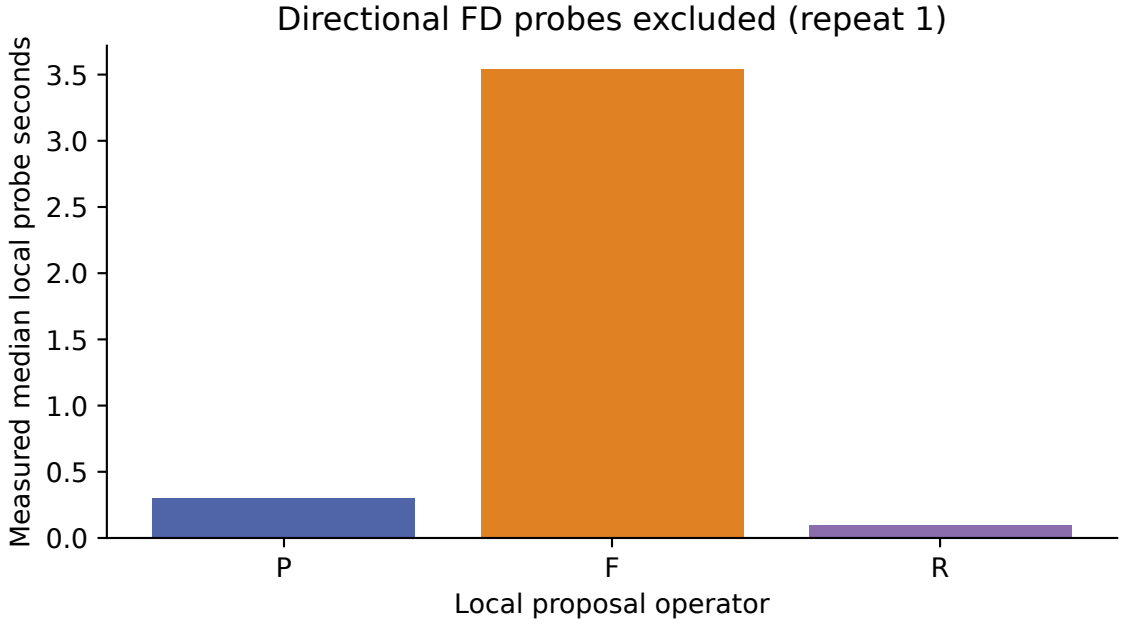
Observed-response projection: actual decoder qualification
hc2: 8/48 finite differences pass
FD error / locked tolerance
Fixed context / direction / h ordinal
vidstg: 17/36 finite differences pass
FD error / locked tolerance
Fixed context / direction / h ordinal
Actual forward check; absolute tolerance also applies
Actual observed response mismatch (%)
P
F
Fixed parent / boundary ordinal (repeat 1)
Actual forward check; absolute tolerance also applies
Actual observed response mismatch (%)
P
F
Fixed parent / boundary ordinal (repeat 1)
Autograd contractions agree; physical finite differences are a separate contract. No GT read or formal efficacy comparison.

Functional counterfactuals and actual local costs









Costs include Jacobian/solver/readouts and CPU audits; these are local probes at A states, not full candidate fitting times.
