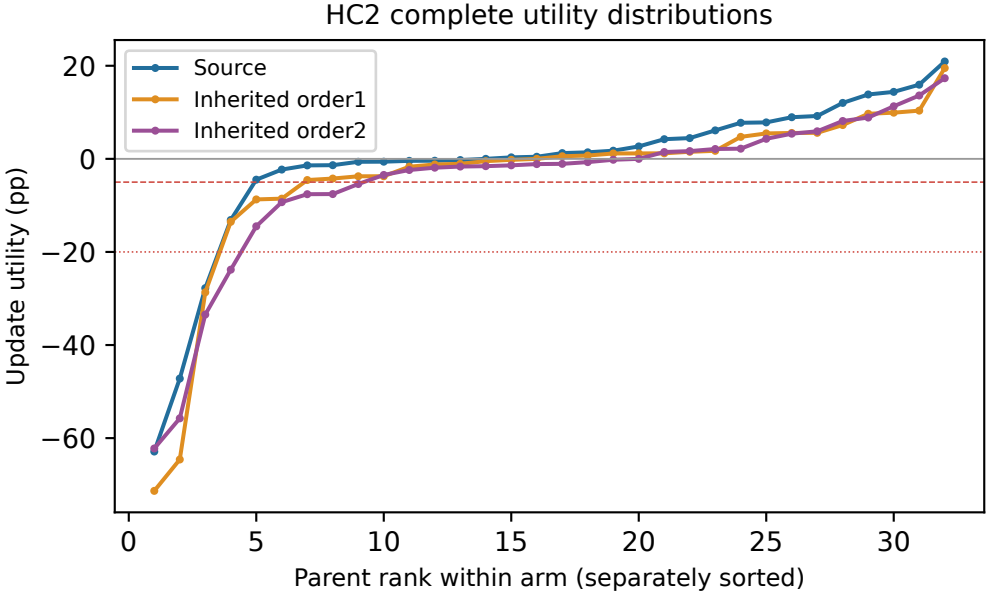
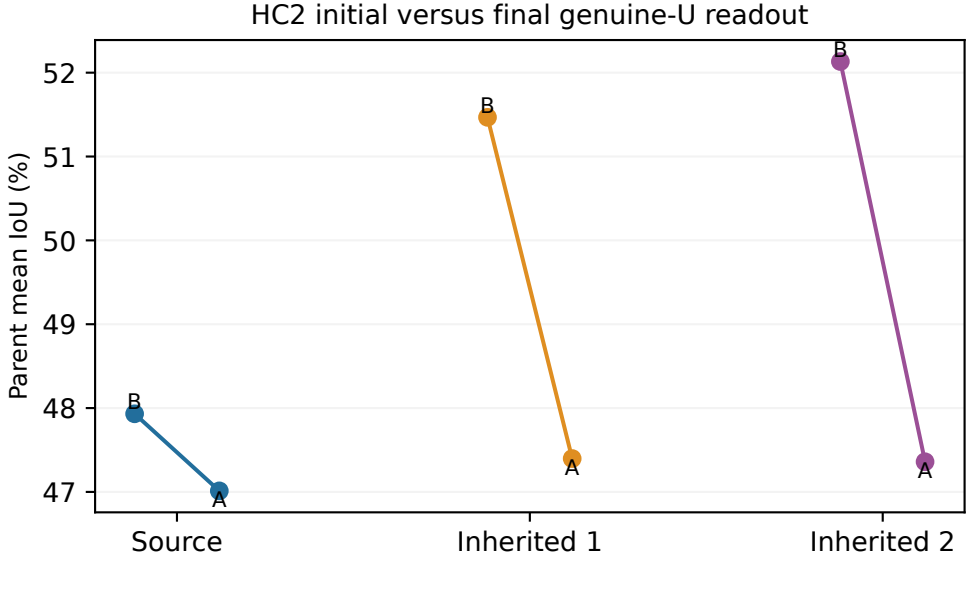
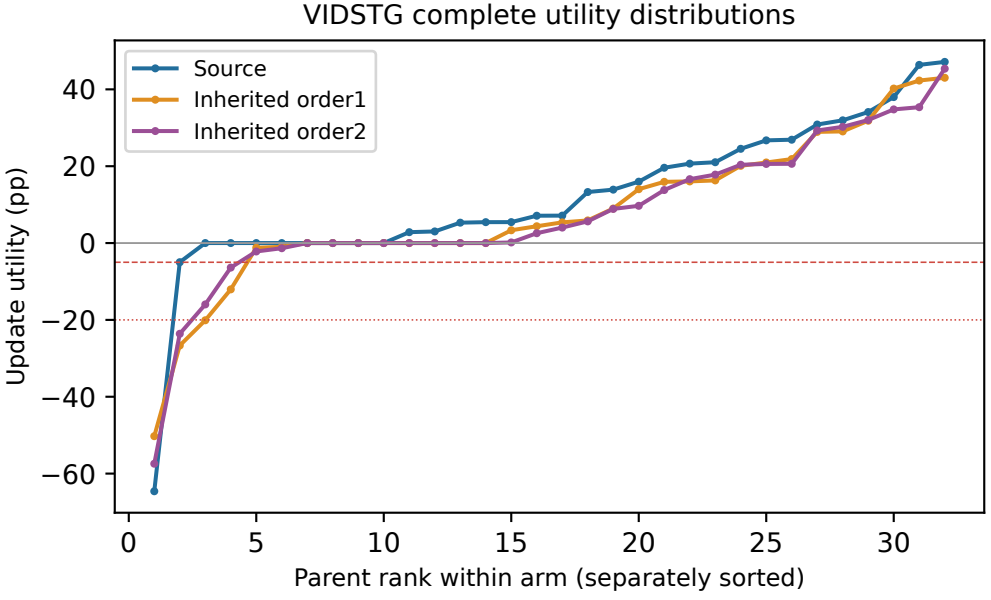
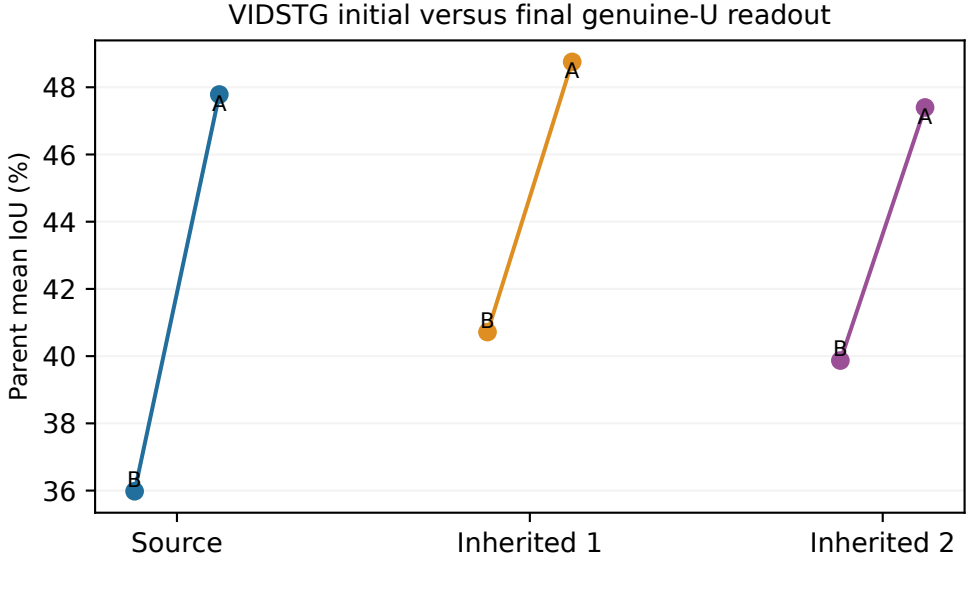
Before/After decomposition and all negative tails

32 historical parents per domain. All 21 empty fits and any undefined U remain in the exported tables.









A better initial prediction is distinct from a more useful update. Dashed tails are prespecified -5/-20 pp.

Evidence controls and limits of the intervention

Control / verification	Actual scope
Actual qualification	24 full episodes; 8 fresh captures; exact complete repeats
Actual formal	192 new complete fits; 4800 rounds; 64 frozen captures
Original-control replay	128 complete inherited fits exactly match original Full
Qualification-formal replay	12 complete formal fits exactly match qualification
Entering state	Only six LN tensors change; Query Residual = 0
Optimizer and random numbers	Fresh Adam per arm; identical underlying antithetic noise
Empty cases	7 Vid queries x 3 arms = 21 full no-sampler/no-optimizer episodes
Teacher and temporal support	Exact Omega0 cached pack; no new DINO; Native WHEN fixed
GT barrier	All 192 predictions sealed before scoring
Independent Adam coordinates	40051200
Replayed sample coordinates	2100480
Independent outcome/statistics	6650
Inference boundary	Actual forward + native-head VJP; no independent full Jacobian
Decision boundary	Historical-panel causality; no unlabelled gate or promotion

Private states, raw fits, samples, teacher geometry and GT remain local. No cancelled baseline is resumed.
